1. DATA COLLECTION, TRANSFORMATION, VISUALIZATION

Designed and implemented a simple end-to-end data workflow that captures user input, processes structured data, and presents insights through visual dashboards. This is a personal project for a local company during **Consumer Fair 2026**.

1.1 DATA COLLECTION

User input is collected through a structured digital form designed to capture consistent and usable data.

- Defined input fields to ensure data consistency
- Structured questions to align with analysis goals
- Ensured clean and standardized responses

1.2 DATA TRANSFORMATION

Collected data is organized into a structured dataset suitable for analysis.

- Transformed raw input into tabular format
- Cleaned and standardized entries
- Organized fields for efficient querying and aggregation

1.3 DATA VISUALIZATION

Structured data is translated into visual insights to support decision-making.

- Designed multiple charts to highlight trends and patterns
- Selected appropriate visual formats (e.g., distribution, comparison)
- Summarized key insights for easier interpretation

2. DASHBOARD, API INTEGRATION, LOGGERS

2.1 PUBLIC DASHBOARD

Built and manages the **Public Dashboard**, a web app enabling external admins to efficiently manage and oversee application systems.

2.2 INTERNAL DASHBOARD

Built and manages the **Internal Dashboard**, a web app enabling internal admins to efficiently manage and oversee application systems.

2.3 VERIFICATION DASHBOARD

Built and manages the **Verification Dashboard**, a web app enabling super admins to keep track of users involvement with identity verifications as a form of account validation and authenticity.

2.4 BROADCASTING NOTIFICATION

Built and manages the **Broadcasting Notification feature**, an integrated web panel, application, and push notification API. For the uses of certain department in broadcasting general messages of the day or specific events.

2.5 SINGLE PAGE PAYMENT INTEGRATION

Implemented a **Single Page Payment Integration**, assisting clients in seamlessly integrating their websites with Online Payment solution systems. The online payment solutions could include Debit/Credit card, QR scanning or push notification payment methods.

The screenshot displays a payment interface titled "Select a payment method!!". It features three selectable options: "Card" (with a card icon), "Pocket QR" (with a QR code icon), and "Pocket Biller" (with a mobile phone icon). Below these options is a yellow informational banner stating: "Pocket Full of Miles will only be awarded to payments through the Pocket QR and Pocket Biller." Underneath the banner is a section titled "Personal Information" containing two required fields: "Full Name (Required)" with the placeholder text "Enter card owner name.", and "Email (Required)" with the placeholder text "Enter your email address.". At the bottom of the form, the logos for "VISA" and "MasterCard" are displayed.

2.6 EMAIL API CALLING

Developed an **Email API** integrating SMTP which will be automatically generated based on triggered events. These events could be when a user is claiming a coupon which will then send an email to specific internal departments or individuals.

2.7 USER PROFILING

Designed a **User Profiling** feature in the portal to identify specific users, aiding in handling complaints and detecting suspicious activity.

The interface includes tabs for Summary, Search, History, and Blocked Users. A search bar labeled 'Search by name or phone:' contains the text '83' and a 'Search' button. Below the search bar is a table with the following columns: Phone Number, Name, Email, User Type, Blocked, Date Created, Date last login, Date first txn, Txn count, Rating, Phone OS, OS Version, Pocket Version, and Block User. The table contains one row of data for a user named Ahsanuddin. A 'Block User' button is located at the end of the row.

Phone Number	Name	Email	User Type	Blocked	Date Created	Date last login	Date first txn	Txn count	Rating	Phone OS	OS Version	Pocket Version	Block User
83	Ahsanuddin	ah											Block User

2.8 USER LOGGING

Implemented a **User Logging** system to record user activities, including login details with usernames and timestamps, for enhanced tracking and accountability.

The interface shows a table with columns for id, username, activity, and timestamp. The activity column contains the text 'User logged on is' followed by the username. The timestamp column shows the time of the login. The table contains eight rows of data.

id	username	activity	timestamp
6		User logged on is	15:56:00
6	Ahsan	User logged on is Ahsan	15:52:32
6		User logged on is	11:34:24
6		User logged on is	08:12:45
6		User logged on is	16:05:22
6		User logged on is	15:51:05
6		User logged on is	15:23:52
6		User logged on is	14:32:47

2.9 INVENTORY RECORDING

Developed an **Inventory Recording** feature, enabling users to manage and order company-related stocks directly through the portal.

2.10 CAMPAIGN API

Developed and implemented a dynamic API which reads and identified if a user, merchant, or vendors are associated with a specific ongoing or expired campaigns/events. Further implementation is enabling admin user to add any unallocated parties to a specific campaigns or events.

2.11 TRANSACTIONS FILTER

Developed and implemented a complex amount or transactions filtering solutions, which filters by using range amount or specific amount accurately up to 2 decimal points (E.g. BND\$10.59).

3.2 USER DASHBOARD SYSTEM

Developed a **User Dashboard System** for the **Revolutionizing Recycling** project, allowing users to create personal accounts and interact seamlessly with the platform.

3.3 MAPS LOCATION API

Integrated a **Maps Location API** into the **Revolutionizing Recycling** project, enabling users to locate nearby recycling machines directly within the application.

3.4 SMART RECYCLING INTEGRATION

Developed a **Smart Recycling Integration** for the **Revolutionizing Recycling** project, creating a working IoT system with various devices to detect material types, weights, and control a stepper motor for waste bin operation.

3.5 CIRCUIT DESIGNING

Designed the **Circuit** for the **Revolutionizing Recycling** project, focusing on current routing and power management to ensure the safety and efficiency of the IoT system.

3.6 PROTOTYPE DESIGNING

Led the **Prototype Designing** for the **Revolutionizing Recycling** project, involving hands-on work such as welding, woodworking, and crafting the physical prototype for the recycling machine.

4. BUSFEED (BUS TRACKER WEBAPP)

4.1 USER DASHBOARD

Developed **BusFeed**, a web app designed to track bus transport, featuring an intuitive user dashboard for easy interaction and real-time updates.

4.2 GPS INTEGRATION

Integrated **GPS functionality** into the **BusFeed** web app, allowing bus drivers to use their mobile devices to share real-time location data, which is then displayed on the system for tracking.

4.3 E-WALLET

Developed an **E-Wallet** feature for the **BusFeed** app, enabling users to make cashless payments for bus rides directly within the app.

4.3 TRANSACTION REPORT

Developed a **Transaction Report** feature for the **BusFeed** app, enabling users to manage their expenses directly within the app.

4.4 PAYPAL INTEGRATION

Integrated **PayPal's payment API** into the **BusFeed** app, enabling a secure and seamless cashless payment feature for users.

5.0 INCIDENT ANALYSIS REPORT

Using Wireshark tools to capture traffics and analyses the packets in relation to the incident. Additionally documenting the analysis into reports.

5.1 OBJECTIVES

To identify the infected Windows client in a corporate network environment by analyzing captured network traffic (PCAP). This involves tracing malicious HTTP requests, identifying the infected IP, and evaluating the nature of the threat.

5.2 ANALYSIS STEPS

1. Filtering Suspicious HTTP Requests

Applied display filter: http.request or frame contains
"Google Authenticator"

Purpose: To locate any HTTP GET request that may involve impersonation or user misdirection related to popular software like "Google Authenticator".

2. Inspecting GET Requests

Discovered GET request to: <http://5.252.153.241/api/file/get-file/29842.ps1>

This domain/IP is not associated with any legitimate services, suggesting a likely phishing or malware distribution site.

3. Identifying the Source IP

Source IP of the GET request:
10.1.17.215

This IP belongs to the internal network 10.1.17.0/24, which confirms it's a client within the local environment.

5.3 EVIDENCE SCREENSHOTS

1. Captured Traffic – Suspicious GET Request

2. IP Source Filtering

3. PowerShell Script File Downloaded

5.4 SCENARIO

The infected user likely:

- Searched for "Google Authenticator" online.
- Clicked a misleading link or ad leading to a spoofed or compromised site.
- Downloaded a .ps1 file — a PowerShell script — which executed malicious code.

5.5 SUMMARY OF FINDINGS

Key Finding	Details
Infected Client IP	10.1.17.215
Destination IP (malicious)	5.252.153.241
File Requested	29842.ps1
Protocol Used	HTTP GET
Indicator of Compromise	File path: /api/file/get-file/ and PowerShell script download
Risk Level	High – direct script download over HTTP from untrusted domain

5.6 CONCLUSION

The client 10.1.17.215 is confirmed as the infected machine. The user unknowingly downloaded a potentially malicious PowerShell script (29842.ps1) from a suspicious IP. This behavior aligns with a social engineering attack vector, likely initiated via deceptive online search results or ads.

6.0 NETWORK FUNDAMENTALS

Network Topologies Implementation, showcasing star, bus and hybrid types of network topologies for network implementation of a company's department. Using hybrid provide better efficiency in mitigating security attacks and role-based management control.

7.0 MULTIMEDIA

Experienced in various multimedia platforms ranging from working in a production crew to graphic, photo and video editors. As well as web applications mockups, wireframes and fidelities.

7.1 GRAPHIC DESIGNS AND AWARENESS BULLETINS

Cyber Security Bulletin: Hari Raya Scams

"Towards a Cyber Safe Digital Society" Vol. 48 | May 2023

- What's in this issue?
- What are Scams?
 - How does it relate to Hari Raya
 - Types of Hari Raya Scams
 - Hari Raya Scams Cases
 - How to avoid Hari Raya Scams
 - What to do if you become a victim to Hari Raya Scams?

New Message

To: Dear Colleagues,
Subject: Hari Raya Scams

Don't let scammers ruin your Hari Raya celebration. As we approach the Hari Raya celebration, it is important for us to be aware of the potential scams that may arise during this season. Scammers often take advantage of the festive season to trick people into parting with their money or personal information. By staying aware and informed, we can protect ourselves from scams and enjoy the true spirit of Hari Raya with peace of mind.

What are Scams?

Scams are fraudulent schemes or deceptive practices that are designed to trick or deceive people into giving away their money, personal information, or other valuables. Scams can take many forms, including online phishing scams, investment fraud, take charity scams, and more.

How does it relate to Hari Raya?

Scams can relate to Hari Raya in several ways because Hari Raya is a festive season that involves a lot of socializing, shopping, and charitable activities. For example, they may use fake online shopping websites or social media platforms to offer attractive deals on festive products or services, but then disappear with the payment without delivering the goods.

Types of Hari Raya Scams

Travel Scams

These scams involve fake travel agencies or tour operators that offer discounted holiday packages for Hari Raya but then disappear with the money paid by the customers.

Online Shopping Scams

These scams involve fake online shopping websites that offer great deals on festive products or services, but never actually deliver the goods after receiving payment.

Donation Scams

These scams involve individuals or groups who go door-to-door or send messages online or via social media asking for donations for charitable causes, but then pocket the money themselves.

Hari Raya Scams Cases

Case 01

Malaysia's Agency Travel Scams

Case 02

Singapore's Online Shopping Scams

Case 01 : Malaysia's Agency Travel Scams

In 2019, the Malaysian police arrested a couple for operating a fake travel agency that offered discounted holiday packages for Hari Raya. They collected money from customers but did not deliver the promised holiday packages.

The couple advertised their packages on social media and other online platforms, offering attractive deals on popular tourist destinations.

Many people were attracted by the discounted rates and made payments to the fake travel agency for their holiday packages.

However, when the time came for the holiday, the customers found that there were no bookings made for them at the hotels and resorts they were supposed to stay at. Some of the customers also found that their flights had been cancelled or not booked at all. It was later discovered that the couple behind the travel agency had collected a large sum of money from their victims and disappeared without providing any of the promised services. The customers were left stranded and out of pocket.

Case 02 : Singapore's Online Shopping Scams

In 2020, Singaporean authorities warned the public about a rise in online shopping scams during the Hari Raya season. It was believed that scammers were using it as an opportunity to trick unsuspecting victims.

Scammers would create fake online shopping platforms or social media accounts to advertise their products which focused on high-demand items, and low in quality by offering attractive deals and promotions.

The victims would then make the payment upfront, but never receive the products they ordered. In some cases, the scammers would send fake or low-quality products, or products that were completely different from what was advertised.

Victims who tried to contact the scammers to request refunds or exchanges would find that the scammers had disappeared or were unresponsive. To avoid falling victim to online shopping scams during the Hari Raya season in Singapore or any other country, it's important to be cautious of unsolicited offers and to verify the legitimacy of the online shopping platform or seller. Check reviews and feedback from other customers, and be wary of deals that seem too good to be true. Always use secure payment methods and avoid making payments upfront before verifying the authenticity of the products and the credibility of the seller.

Mobile Device Management Policy

In case of assignment of new mobile devices, DC & IT team will verify the availability of a device.

All employees are prohibited to use LBN's data with their business telephone systems.

Mobile Accessories

- Battery
- Battery Charger
- Headset
- Case
- Screen Protector

1 Assignment of New Mobile Devices

Employees must use the device for work.

Employees must use the device for work.

2 Damaged Devices

DC & IT should be notified immediately if a device is damaged or missing.

3 Technical Requirements

- Devices must be configured to require a screen lock after 2 minutes of inactivity.
- Devices must be configured with a secure password. At least a PIN code with 4 characters which must be changed every 90 days. The password history will include the latest five.
- Device must be configured to wipe a lost or stolen device.

4 User Requirements

Users must only load data essential to their role onto their mobile device(s).

If a user requests that unauthorized access to LBN's data has taken place on a mobile device, the user must report the incident in alignment with DC & IT incident handling process.

5 Confidentiality

All employees should be aware that other people may overhear conversations made on mobile devices and take steps to ensure they do not inadvertently breach any of LBN's rules on confidentiality.

6 Termination of Employment

7 Consequences in the event of Breach

In the event of a contractual and/or disciplinary breach, LBN and its individual employees are generally liable to penalties, including criminal law. LBN will verify to the extent permitted by applicable legal and contractual compliance with the rules laid down in the policy.

Any mobile devices plus associated equipment used by LBN must be returned to DC & IT upon leaving employment.
